

The All-in-One Security Appliance for your Business

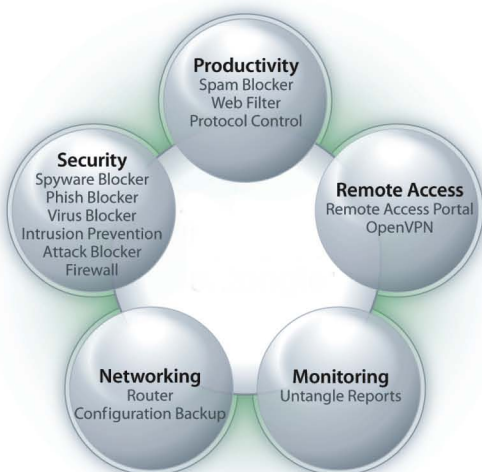

Freehand GRASP Appliance

Protect, Control and Monitor Your Network

Freehand Networks believe that small and medium businesses should have the same protection as enterprise businesses without the cost of an enterprise solution.

Unwanted network traffic can severely impact the performance of a network of any scale. Your employees shouldn't have to fight for bandwidth or suffer from slow internet connectivity.

There is also the potential of more harmful traffic reaching your computer systems and doing damage. Viruses, spyware, malware and spam can seriously disrupt a business and lead to downtime and stolen data.

The Freehand Solution

Freehand's GRASP Appliance is designed specifically to meet the needs of the small business. It provides security at your internet gateway, blocking harmful traffic before it reaches your office network or your computer systems.

Blocking unwanted network traffic such as viruses, spyware, spam and other threats is an immediately recognizable benefit to everyone. But what about your employees? How do you validate that they are surfing safely?

Our GRASP Appliance monitors and manages user access to internet resources which may be harmful such as malware sites or sites which carry inappropriate content such as pornography.

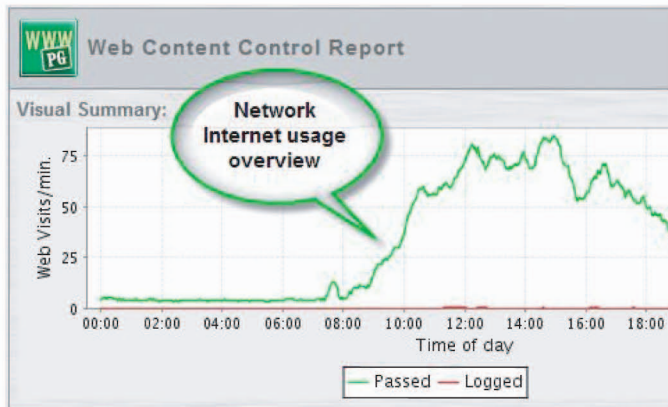

According to an industry study, at least 90 percent of large enterprises and 50 percent of small companies in the United States now monitor and filter their employees' Internet access.

The primary reasons companies' use Internet filtering and monitoring are to block inappropriate content, control productivity and preserve network bandwidth.

In addition to blocking access to inappropriate content, our GRASP appliance also warns when you are attempting to visit a site that may include malware or phishing.

Key Benefits:

- Blocks threats from the internet before they can do damage
- Increases the performance of your network by restricting use to legitimate users
- Controls acceptable internet use policies by blocking access to inappropriate web sites
- Easy to understand reporting shows who is doing what
- Backed by professional support and management for a no-hassle solution

A Detailed View of your Network

Freehand GRASP incorporates advanced reporting capabilities which enable you to see what's happening on your network. Our detailed reports show a visual summary of traffic levels, top talkers in terms of internet usage, as well as a breakdown of each user's activity. Not only can you gain an understanding for traffic flow or internet 'hot points' throughout the day or week, but you can also view a big picture of the kind of web browsing behavior occurring within your company.

Web Content Control - Logged Violations (user)
